On May 30, 2002 this sequence version replaced gi:21104241.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeates; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em:, EMBL; Sw:,
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6161 GAGAAGGGAGCTGAAGAGGATGAAGAGGAGGTGGAAGAATGTGAACCCCA 6210

AL Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

The sequence in this assembly is a combination of BAC based reads (http://www.hgcc.bcm.tmc.edu/projects/rat/). Each contig Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig described individual sequence contigs are ordered and oriented, and separated extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Puazo, M., Quiroz, J., Rachlin, E., Reeves, K., Regier, M.A., Reigh, R.                                                                                                                                                                                                                               NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Worley,K.C.

Submitted (10-CCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Oct 10, 2002 this sequence version replaced gi:21953942.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Massey, E., Mawhiney, E., McLeod, M.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Direct Submission
                                                                                                                                 NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft_data.html).

NOTE: This is a "working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                            as soon as it is available and be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (bases 1 to 261258)

On Sep 21, 2002 this sequence version replaced gi:21743229.
The sequence in this assembly is a combination of BAC based reads whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the contigs that consist entirely of whole genome shotgun sequence contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                        'NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html) (NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence that soon as it is available and the accession number will

                                                                                                                                                    밁
                                                                                                                                                                                 ঠ
                                                                                                                                                                                                                                                                                                   The invention relates to genotyping an alpha-2B, 2A, or 2C adrenergic CC receptor gene (1)-(III) by detecting a polymorphic site, comprising; (a) cobtaining a sample having a polymorphic site, comprising; (a) CC or alpha2C or fragment or complement of, and (b) detecting a polymorphic cite comprising nucleotide positions 901-909 of (I), a site comprising CC cytosine or guanine at position 753 of (IIV) or a site comprising (A) CC (gyggcggggcg) or (B) (gyggcggtgag) at positions 961-972 of (III). The CC method may be used for genotyping an alpha2B, alpha2A or alpha2C receptor gene and further used to determine whether an individual is at increased crisk of developing a disease associated with alpha2B, alpha2A or alpha2, comprising detecting a polymorphic site which correlate to disease and combinations of these. In addition, the technique may be used to predict an individual's response to an alpha2B, alpha2A, or alpha2C agonist (e.g. curvaphrine, norepinephrine, condidine, oxymetazoline, guanabenz, CC (UK14304, BHT933 and combinations of these) or antagonist (e.g. vohimbine, prazosin, ARC 239, rauwolscine, idazoxan, tolazoline, phentolamine and CC combinations of these) by detecting the polymorphic site and correlating the site to a predetermined response (where the response is correlated to adenylyl cyclase, MAP kinase activity, phosphorylation or inositol continuated for a 9 nucleotide polymorphic site found at nucleotides 901-909 of the human alpha-2BAR variant, the sequence is deleted for a 9 nucleotide polymorphic site found at nucleotides 901-909 of the human alpha-2BAR variant, the sequence is that of the third
                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                            Query Match

                                                                                                                      The present sequence is a gene encoding human alpha2B-adrenoceptor (alpha2B-AR) variant protein. Alpha2B-AR has a glutamic acid repeat element (amino acids 298-309) of 12 glutamates, in an acidic stretch of 18 amino acids (amino acids 294-311), located in the third intracellular loop of the receptor polypeptide. The variant is obtained by deletion of three glutamates from the Glu repeat (amino acids 307-309). Alpha2B-AR gene is located on chromosome 2. Alpha2-AR mediate many of the physiological effects of the catecholamines, norepinephrine and cepinephrine. An antagonist of alpha2B-adrenoceptor is useful for treating a mammal suffering from vascular contraction of coronary arteries and a coinically expressed as coronary heat disease (CHD), unstable chronic angina pectoris which is clinically expressed as Prinzmetal's variant form or acute myocardial infarction (AMI). Alpha2B-AR gene is used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing the antihypertensive effect of compounds. The present sequence is human alpha-2B-adrenoceptor variant DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences including eye diseases such as retinopathy, neovascular glaucoma and leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, artematoid arthitis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 6904 BP; 1244 A; 314 C; 2303 G;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  for the diagnosis or therapy of behavioural disorders, neurological disorders and cancer, in particular major depressive disorder, Tourette's syndrome, schizophrenia, psychiatric and neurological disorders, smoking, drug abuse, alcoholism, personality traits, compulsive gambling, human immunodeficiency virus dementia, migraine, behaviours in schizophrenic and schizoaffective patients, and suicidal behaviour in patients with schizophrenia. The nucleic acid is useful for detecting the methylation state of all CpG dinucleotides and/or single nucleotide polymorphisms (SNPs). The present sequence is human chemically treated genomic DNA
                                                                                                                                                                                                                              CDS

                                                                                                                                                                                               The invention relates to genotyping an alpha-2B, 2A, or 2C adrenergic CC receptor gene (I)-(III) by detecting a polymorphic site, comprising; (a) CC obtaining a sample having a polymorphic site, comprising; (a) CC or alpha2C or fragment or complement of; and (b) detecting a polymorphic CC or alpha2C or fragment or complement of; and (b) detecting a polymorphic CC site comprising nucleotide positions 901-909 of (I), a site comprising (A) CC (site comprising at positions 901-909 of (II), a site comprising (A) CC (site comprising at positions 961-972 of (III)) The CC method may be used for genotyping an alpha2B, alpha2A or alpha2C receptor CC gene and further used to determine whether an individual is at increased CC risk of developing a disease associated with alpha2B, alpha2A or alpha2, CC comprising detecting a polymorphic site which correlate to disease and CC combinations of these. In addition, the technique may be used to predict CC an individual's response to an alpha2B, alpha2A, or alpha2C agonist (e.g. CC (UK14304, BHT933 and combinations of these) or antagonist (e.g. vohimbine, prazosin, ARC 239, rauwolscine, idazoxan, tolazoline, phentolamine and CC combinations of these) by detecting the polymorphic site and correlating the site to a predetermined response (where the response is correlated to phosphate levels). The present sequence is that of the third CC intracellular loop of the human alpha-2BAR (GenBank Accession AF009500), the sequence includes a 9 nucleotide polymorphic site at nucleotides 901-909, absent in the alpha-2BAR variant (AAI99906)
                                                                                 Matches
                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Genotyping an alpha-2B, 2A, or 2C adrenergic receptor gene useful for determining whether an individual is at increased risk of developing a disease associated with the corresponding receptor comprises detecting

Alpha2B-AR has a glutamic acid repeat element cacids (amino acids 298-309) of 12 glutamates, in an acidic stretch of 18 amino cacids (204-311), located in the third intracellular loop of the protein the chiral protein of cated caced on chromosome 2. CC alpha2-AR mediate many of the physiological effects of the cated on chromosome 2. CC catecholamines, norepinephrine and epinephrine. An antagonist of alpha2B-CC contraction of coronary arteries and a disease involving vascular cc contraction of coronary arteries and a disease involving vascular cc contraction of coronary arteries which is clinically expressed as conficulally expressed as Prinzmetal's variant form or acute myocardial cc infarction (AMI). Alpha2B-AR gene is used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing the antihypertensive effect of compounds. The present sequence is human alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Page 27-29; 35pp; English.

                                        A genomic DNA clone (AAT59499) codes for human alpha-2B adrenergic receptor (AAM1804), a member of the rhodopsin-like signal transducer family. It was isolated from a human spleen genomic library in the lambda vector Charon 28 by screening with a 1.6 kb fragment of the human 5-hydroxytryptamine receptor gene. Plasmid pNGC-alpha-2B comprising DNA encoding the alpha-2B adrenoceptor is deposited as ATCC 68144. Vectors have been adapted to allow prodn. of alpha-2B adrenoceptor in bacterial, yeast or mammalian cells; transfected Ltk- cells, designated L-NGC-alpha-2B, are deposited as ATCC CRL 10275. Membranes of such cells can used in novel methods to identify drugs which specifically interact with, and

cc polynucleotide probes comprising a sequence selected from one of the 1490 cc sequences mentioned in the specification. The combination is useful as an carray element in a microarray for monitoring the expression of a number cof diagnosis and treatment of cancer and immunopathology and neuropathology. Cc The microarray is useful in diagnostics and treatment regimens, drug cc discovery and development, toxicological and carcinogenicity studies, cc forensics and pharmacogenomics. The microarray is also useful for combination is also useful for purifying a subpopulation of mRNAs, cDNAs carray can detect changes in expression and diagnostic applications. The cc array can detect changes in expression in a large number of genes coding codifferent signaling pathway populations which can be used to diagnose covarious diseases including cancer e.g. adenocarcinoma and leukaemia, climmunopathies e.g. ALDs and asthma, neuropathes e.g. Alrheimer's disease cc and Parkinson's disease. The present sequence represents a polynucleotide probe of the invention. Note: The sequence data for this patent did not cormat directly from USPO at the large counciled in electronic cormat convision user.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S X
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Loc

CC The present invention describes antigenic peptides (I) comprising: (a) CC any one of 1601 sequences (see ABP82019 to ABR83619) of 12-24 amino CC acids. Also described: (1) an assay for the detection of a particular GC and (2) an isolated antibody having high specificity and high affinity or CC avidity for a particular GPCR. (I) can be used as GPCR modulators and in CC gene therapy. The antigenic peptides for GPCRs are useful in detecting an CC antibody against a particular GPCR. (I) can be used as GPCR modulators and in the production of specific CC antibodies. The peptides and antibodies are also useful for detecting an CC presence or absence of corresponding GPCRs. The antigenic peptides for CC GPCRs and antibodies are useful for detecting the CC treating immune-related diseases, growth-related diseases, cell groliferative or autoimmune diseases, growth-related diseases, cell groliferative of corresponding GPCRs. AlDS, Alzheimer's disease, CC atherosclerosis, bacterial, fungal, protozoan or viral infections, corresponding, allergies, Crohn's disease, diabetes, graft versus host corresponding and designing drugs for CC disease, parkinson's disease, multiple sclerosis, pain, psoriasis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ន្តន្តន្តន្តន្តន្តន
                            tumour-associated antigen. The cDNA is useful in gene therapy and as an oligonucleotide probe for detecting mRNA coding for the melanome associated antigen in a sample. The cDNA is useful for vaccinating an individual who is at risk of getting cancer, suspected of having cancer cor has cancer. The present sequence is useful for vaccinating an melanoma tumour by inducing an immune response against it. The melanoma of melanoma, monitoring metastatic melanoma, as new targets for recurrence and metastatic disease to be detected and disease burden of particular use in melanom of the melanoma tumour-associated antigen is melanoma to be detected and disease burden.

The invention relates to novel purified or isolated nucleic acids of CC essential genes of Aspergillus funigatus. The isolated nucleic acids of the invention are used to treat or prevent infections by a pathogenic cC organism such as A. funigatus, to treat a non-infectious disease in a subject (e.g. cancer), to prevent or contain contamination of an object cby A. funigatus, or to prevent or inhibit formation on a surface of a cC biofilm comprising A. funigatus. The polynucleotides are useful for cx therapeutic use, as markers for host tissues in which the pathogenic cryanisms invade or reside, for comparing with the DNA sequence of A. CC funigatus to identify duplicated genes or paralogues having the same or similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic organisms to identify potential orthologous essential or virulence genes, for selecting and cc making oligomers for attachment to a nucleic acid array for examination of expression patterns, for raising anni-protein antibodies, as an capture to raise anti-DNA antibodies or to elicit another immune constitution. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for constitution of the pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence cf factors. This polynucleotide sequence represents one of the essential cc genes of Aspergillus funigatus of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 15

The invention relates to novel purified or isolated nucleic acids of CC essential genes of Aspergillus funigatus. The isolated nucleic acids of CC the invention are used to treat or prevent infections by a pathogenic CC organism such as A. fumigatus, to treat a non-infectious disease in a CC subject (e.g. cancer), to prevent or contain contamination of an object CC subject (e.g. cancer), to prevent or inhibit formation on a surface of a CC by A. fumigatus, or to prevent or inhibit formation on a surface of a CC proposition of a contain contamination of an object CC proposition of the protein for contain contamination of an object CC proposition of the pathogenic CC contains invade or reside, for comparing which the pathogenic CC configatus to identify duplicated genes or paralogues having the same or configatus to identify duplicated genes or paralogues having the same or sequences of other related or distant pathogenic organisms invade or related or distant pathogenic organisms to identify contential orthologous essential or virulence genes, for selecting and contential orthologous essential or virulence genes, for selecting and contained to relate the pathogenic organisms to identify contained to relate and for identifying polynucleotides or to elicit another immune contained to relate the protein antibodies, as an interaction. The polypeptides may be used to raise antibodies or to identify the binding coccurs or to identify inhibitors of the binding coccurs or to identify inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

CC The invention relates to novel purified or isolated nucleic acids of CC essential genes of Aspergillus fumigatus. The isolated nucleic acids of CC the invention are used to treat or prevent infections by a pathogenic CC organism such as A. fumigatus, to treat a non-infectious disease in a CC by A. fumigatus, to treat a non-infectious disease in a CC by A. fumigatus, to treat or contain contamination of an object CC confirm comprising A. fumigatus. The polynucleotides are useful for CC expressing recombinant protein for characterisation, screening or CC conganisms invade or reside, for comparing with the pathogenic CC fumigatus to identify duplicated genes or paralogues having the same or CC similar biochemical activity and/or function, for comparing with DNA sequences of other related or distant pathogenic cromparing with the DNA sequence of A. CC sequences of other related or distant pathogenic organisms to identify contential orthologous essential or virulence genes, for selecting and CC making oligomers for attachment to a nucleic acid array for examination confirm contention, as an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antigen to raise anti-DNA antibodies or to elicit another immune response, and for identifying polynucleotides encoding the other protein with which binding occurs or to identify inhibitors of the binding interaction. The polypeptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as a marker for host tissues in which pathogenic organism invade or reside, and to isolate correlative receptors or ligands in the case or virulence factors. This polynucleotide sequence represents one of the essential genes of Aspergillus fumigatus of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hybridisation assay; genetic mapping; gene eprotein identification; signal transduction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          25-FEB-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   06-SEP-2000

                                                                                   Porcine and human SPAR cDNAs were compared. They are highly homologous, divergent. The 32.3 kDa human and 3.8 kDa porcine ORFs are sinular. Both The projected secondary structure of highly nor is similar. Both porcine counterpart. The pSPAR protein is predicted to have a hydrophoic a second alpha helix of 28 residues beginning at AA 48. It is followed by a turn, pleated sheets. Human SPAR ORF has a 25 AA hydrophobic and treesidue 29, followed by beta-pleated sheets and turns. Another 28 residue beta- helix begins near AA 200. (Updated on 25-MAR-2003 to correct pN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş

Sequences ABP31028-ABP35561 represent 4534 novel human proteins
CC designated ORF (open reading frame) 1-4534, and sequences ABN75054-
CC ABN79587 represent cDNAs encoding them. The invention also encompasses
CC polypeptides at least 80% identical to the ORF1-ORF4534 (collectively
CC referred to as ORFX) proteins, polynucleotides at least 85% identical to
CC the ORFX nucleic acid sequences, vectors and host cells comprising ORFX
CC polynucleotides, the recombinant production of ORFX proteins, antibodies
CC polynucleotides, methods of detecting ORFX proteins, antibodies
CC polynucleotides, methods of screening for modulators of ORFX expression or
CC cartivity, and methods of screening individuals for a predisposition to an
CC ORFX-associated disorder. The ORFX proteins of the invention have a wide
CC range of biological activities, such as cytokine, cell proliferation,
CC cissue growth, angiogenesis, activin or inhibit activity, chemotactic/
CC chemokinetic activity, haemostatic activity, thrombolytic activity,
CC and antiinfective activity, and may also be involved in the determination
CC of bodily characteristics, fertility and behaviour. ORFX proteins,
CC other proliferative disorders such as epilepsy and Alzhatment of cancers,
CC cardiovascular diseases, immune system disorders, disorders related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 1036; 2508pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cardiovascular disease; immune system disorder; organ transplantation; tissue growth disorder; tissue regeneration disorder; diabetes mellitus; hypothyroidism; cholesterol ester storage disease; infection; vulnerary; vasotropic; antipsoriatic; antidiabetic; cytostatic; nootropic; neuroprotective; antiatherosclerotic; anticoagulant; thrombolytic; cardiant; hypotensive; antithyroid; antiinflammatory; immunomodulator; dermatological; analgesic; virucide; antibacterial; fungicide; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; ORF; open reading frame; ORFX; drug screening; diagnosis; disease monitoring; cytokine; cell proliferation; cell differentiation; immune modulation; haematopoiesis replation; thesue growth; angiogenesis; activin; inhibin; chemotactic; chemokinetic; haemostatic; thrombolytic; tumour inhibition; bodily characteristic; fertility; behaviour; cancer; proliferative disorder; neurological disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative,

ORFX nucleic acids may also be used as a source of primers and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous sequences, in genetic diagnosis, and in forensic biology. The ORFX nucleic acids may additionally be used to produce transgenic animals which may be useful for studying the function and/or activity of ORFX protein, and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
The invention relates to a novel method of predicting at least one toxic effect of a compound. The method comprises a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the progression of a toxic effect of a compound, predicting the toxicity of a compound, or identifying toxicity markers in tissues or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22-MAY-2001; 2001US-0292335P.

CC The present invention relates to a method for predicting a toxic effect CC of a tompound. The method comprises preparing a gene expression profile CC of a tissue or cell sample exposed to the compound, and comparing the CC differential expression of the compound, and comparing the CC differential expression of the gene indicates at least one toxic effect. CC compound, predicting appearance to the strong confidence of a compound, identifying an agent that modulates the onset or compound, identifying an agent that modulates the onset or CC progression of a toxic response, predicting the cellular pathways that a CC compound modulates in a cell, and identifying an agent that modulates at CC least one activity of a protein. The method and compositions of the progression, are useful in identifying toxicity markers in a cell situations of the confidence of the confide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    맑

The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease physiological states, or disease progression. This polynucleotide represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this pate did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5000 BP; 1238 A; 1284 C; 1246 G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2003-689530/65.

The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte

```

The sequence given encodes the rat insulin receptor substrate-1 (IRS-1). The IRS-1 was isolated using the probe sequences given in AAQ29701-02. The IRS-1 sequence can be inserted a vector and used to transform cells to produce IRS-1. The level of IRS-1 metabolism can then be studied and abnormal levels may be seen to be indicative of insulin related disease. (Updated on 25-MAR-2003 to correct PN field.)

                                                                           The present sequence is the mouse oocyte-specific gene Npm2, complete cDNA clone 01-236. It is derived from mouse 2-cell embryo cDNA library and expressed in the oocytes of intermediate size type 3a follicles and all type 3b follicles. This clone is used to screen and identify the mouse Npm2 gene. It is homologous to Xenopus laevis nucleoplasmin (Xnpm2) expressed exclusively in eggs. It provides in vitro and in vivo reagents for studying ovarian development and function. This sequence has gynaecological and contraceptive activity. Agents which modulate 01-180, 01-184 and 01-236 may be used to treat cell proliferative or degenerative genes. This ovary-specific sequence can be used as reagents to evaluate potential contraceptives, to block ovulation in a reversible manner. It is also used to screen for genetic mutations in signalling pathways, that are associated with some forms of human infertility or gynaecological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01\text{-}180, 01\text{-}184 and 01\text{-}236 polypeptides and nucleic acids encoding useful for evaluating potential contraceptives to block ovulation reversible manner.

                                                                                                                        Ś
                                                                                                                                                                                                                                   CC The present sequence is the mouse ovary-specific Npm2 gene, mapped to the CC middle of mouse chromosome 14. It shows linkage to D14Mit32, this region CC series and identify Npm2 gene. It is the mammalian ortholog of xenopus CC laevis nucleoplasmin (Xnpm2) expressed exclusively in the eggs. It CC provides in vitro and in vivo reagents for studying ovarian development CC and function. This sequence has gynaecological and contraceptive activity. Agents which modulate 01-180, 01-184 and 01-236 may be used to treat cell proliferative or degenerative disorders, associated with CC abnormal expression of these ovary specific genes. This ovary-specific CC sequence can be used as reagents to evaluate potential contraceptives, to CC genetic mutations in signalling pathways, that is associated with some CC form of human infertility or gynaecological cancer

Sequencing primer: $\frac{7}{8}6$
This sequence is from a Xenopus Gene Collection (XGC) library constructed by Aaron M. Zorn.

CONA was oligo dT primed from Sug of poly A+ RNA from egg. EcoRI-Not1 cut cDNA was then ligated into pCS107 with EcoRI at yend and NotI at the 3' end.

Vector: pCS107; Site 1: EcoRI; Site_2: NotI

Host: Escherichia coli XLI-blue.
